

MindManager support for Windows 10 ARM machines

- MindManager

Question

Can I run MindManager on a Windows 10 ARM machine such as Microsoft Surface Pro X?

Information

At the moment MindManager requires x86 support to run, and it will not run natively on an ARM machine.

Windows 10 ARM does support emulation for x86 apps, but compatibility and performance of MindManager working in this mode hasn't been fully tested and is not guaranteed.
