

How to transfer MindManager settings

MindManager

Symptoms

- 1. How to transfer Settings?
- 2. How to move topic alerts from previous MindManager versions to the current one?

Resolution

In order to transfer topic alerts from previous MindManager versions to the current one please perform the following steps:

- 1. Click [Windows-key]+[R] and enter: regedit
- 2. Navigate to the following key:

[HKEY_CURRENT_USER\Software\Mindjet\MindManager\X\Current\

(Where the X is a MindManager version)

- 3. Right-click the key and select 'export' in the context menu. Then please save the file to your desktop.
- 4. Close the Registry Editor.
- 5. After the previous steps please right-click the previously saved file and select 'edit' in the context menu. if prompted, select the application: Notepad
- 6. In the path of the key, exchange the old version number with the new one. For MindManager 2020 it should be:

[HKEY_CURRENT_USER\Software\Mindjet\MindManager\20\Current\]

7. Save the file and close Notepad. Now, run the file via double-click and confirm any prompts.
